License Plate Recognition (LPR) camera allows easy entry and exit into facility.

Customer Experience

Digital Ticket transforms your parking operation to a digital experience. Eliminate paper tickets and costly maintenance associated with traditional PARCS equipment. Parkers pay via phone for a completely digital and frictionless experience.

Transient parkers enter and exit a gated location either by scanning the QR code or texting the phone number on the sign to open the gate. License plate number and credit card information are entered on their phone to pay for their parking session. Payment is captured upon exit.

An option exists for subscribed parkers entering the lot who have already provided their license plate and credit card info ahead of time for easy entry and exit. A license plate recognition (LPR) camera reads the license plate and opens the gate upon entry or exit – making it a completely seamless experience.

Key Benefits

+ Eliminates cost of paper tickets and required maintenance associated with traditional PARCS equipment

+ Provides a frictionless and seamless experience for customers

+ Reduces or reallocates labor away from an in-lane attendant

+ Cashless operation with automatic payments

+ Cost effective installation with minimal investment

Enforcement

Enforcement is optional and fully customizable. Options exist for daily manual monitoring or fully automated in order to maximize revenue.
